What is Campfire?

From February 28th to March 1st, we are running a 24-hour game jam called Campfire in Bengaluru. It's a similar event to Daydream, which was Hack Club's largest game jam, with 100 concurrent events around the world (including Bengaluru) and 7,000 attendees. Campfire is a beginner-friendly game jam for high schoolers where programmers, artists, and engineers will spend 24 hours together building fun computer games.

We're a part of Hack Club, a 501(c)(3) nonprofit organization that empowers 50,000+ teenagers around the world to code through a network of coding clubs and events. Hack Club has run and supported countless hackathons and game jams, including one on a train across Canada, another on the Pacific Crest Trail, and many, many more!

Our Mission

Our mission is to inspire the next generation of makers worldwide by introducing them to game development in a fun, collaborative environment.

They will work in teams to build projects and advance their creativity, collaboration, and innovation skills. For Hack Club, hacking means problem-solving, innovating, and creating incredible projects and friendships. The Hack Club community is made up of coders, makers, and artists brought together through their shared passion for creating. Game jams connect creators, and our organizing team would not have met if it weren't for hackathons and game jams run by Hack Club!

Game jams let others see the joy in coding that we do. Game jams give people an opportunity to learn how to code for the first time in a low-stakes environment. The

magic of game jams is being able to draw inspiration from peers who are also innovating and making cool projects, even after the event. Beyond this, making friends and building a community are among the most important parts of game jams like Campfire. We aim to help people see our community and inspire them to keep building themselves. We would never have been inspired to run an event like this without other people doing it before us, and we'd love to inspire people to keep running more game jams in the future.

Bengaluru is particularly well-suited for our event because it is a global center for innovation and research. High school coders are inspired and have countless opportunities here, and by supporting local high schoolers through hackathons and game jams, we aim to provide opportunities and foster the next generation of innovators in the Boston area.

By supporting us, you help us further our mission. We can't run this event without you, and we would appreciate any support.

Members of our team have organized:

- Daydream Bengaluru, a satellite game jam among 100+ cities worldwide. Students competed to make games along the theme "sacrifices must be made".
- Scrapyard Bengaluru, a satellite hackathon among 100+ cities worldwide, where students competed to make the most useless, scrappiest projects.
- Counterspell Bengaluru, 50 concurrent game jams in 20 countries with 1,500 attendees around the world, where students came together to design, build, and ship complete games in just one night.

If you want to host us...

Thank you so much for your generosity! To ensure this event is a success, we've outlined some points of discussion to ensure we set up well in your venue.

Date & Time: The weekend of February 28th to March 2nd. Unfortunately, we can't be flexible with these dates because our event has to be concurrent with others around the world.

Demographic: High school students (almost all <18) who are excited to code! We're expecting 600-900 attendees.

Budget: Because we have a limited budget, we cannot pay to use your space. Consider it as a generous donation! We will pay any cleaning fees needed and are happy to negotiate sponsorship perks in return!

Food: We don't plan on cooking, except for potentially preparing coffee and hot chocolate! We plan on purchasing/catering all other food, but we will require running drinkable water.

Hygiene: We'll need bathrooms!

Loudness: Akin to an active classroom: background music, bursts of excitement, and otherwise chatter between friends.

Rooms: Ideally, hackathons have:

- Large space for opening and closing ceremonies
- Breakout rooms for workshops
- Closed space for setting up sleeping bags
- Assorted areas for general work and play

We can make almost any office environment work, though!

Supervision: As we will host mostly minors, we will have background-checked adults supervising throughout the entire event duration. We will make sure attendees are behaving and being respectful of the space. All attendees also follow our Code of Conduct.

Security: We'd love to allow attendees to enter & exit at designated times in the event for fun outdoor activities we plan on organizing, provided their parents have signed the appropriate waiver! Aside from official activities, attendees would be forbidden from leaving the premises save for serious circumstances, pending parental permission.

Technology: We need cell service and Wi-Fi to support 900+ users (~2000 devices), and sufficient electricity and power outlets to support 250+ plugged-in electronics (>30 outlets). We'd appreciate built-in AV equipment (projectors, microphones, speakers, etc.) if possible.

Other: If there's anything else we may have overlooked, please bring it up in our emails/call(s)! We aim to have full clarity on what this event entails so it can be a success for everyone.

If you want to sponsor us...

Here are some suggested sponsorship perks! You aren't required to claim every perk (if, say, you're unable to send technical mentors). We're always open to building custom perks!
